

A word from our C.E.O.

Welcome to Ramrod Senior Housing! Our park is beautiful and we have many committees that work behind the scenes making sure the park tranquility & safety are top priorities.

Our committee opportunities are many and I encourage you to get involved. Look over each committee until you find the right ones for you.

You will enjoy the fellowship as well as the many caring personalities that make up the park.

Belita Michnowicz

JOIN A FUN COMMITTEE

The committee chair person and committee members are responsible for planning a monthly meeting for our mobile park community. The planning requires volunteer assistance. [Select our committee for fun along with educational value.](#)

These programs are often presented by outside professionals who volunteer to come to our park and share their knowledge.

The meetings are open to all residents and are encouraged to attend. Informative sessions are held, at 7:00 PM on the last Tuesday of each month in the Spalton Pavilion.

Check the gazette for our committee chairman

RAMROD COMMITTEE
DEVELOPMENT
1010 Terrace Road, Rialto, California 92410

DISASTER COMMITTEE

Ramrod is a proactive community. In our planning, we take time to look at many potential disasters. We set protocols in place to reduce their affects on our senior community.

RISK MANAGEMENT

Living in California provides many beautiful opportunities for outdoor activities. Our weather is some of the best on the planet. There are times during our summer months where we enjoy extreme heat, during the winter months, we often times have little or no rain. The interior organization of our mobile homes contribute to our safety or risk of accidents.

We work together, with public protection agencies, planning & preparing to avoid potential disasters!

I want to take a moment to express my sincere gratitude for our enduring partnership in ensuring safety, fire prevention and disaster preparedness within our community

Our collaboration over the years has been invaluable. Your commitment to safety measures participation in training programs and dedication to disaster preparedness have made our community stronger and more resilient. Together, we have minimized risk and created a safer environment for all.

Effective communication and joint efforts have been essential to our success.

Please know that your efforts have not gone unnoticed. The Rialto Fire Department deeply appreciates your commitment.

As we face future challenges together, rest assured that we are here for you. We look forward to continuing our partnership in making the Ramrod community of Rialto an even safer place for all residents.

Thank you for your unwavering support!

Brian Park
Fire Chief

FIRE:

DAMAGE

We invite the local fire department personnel to come and share their tips on mobile home fire prevention. Since the Manufactured homes have little or no insulation in the interior walls, they may burn more rapidly. Our presenters give us safety tips on how to keep our homes safe. They recommend having a couple of current fire extinguishers handy in different locations in your coach.

Fire Extinguishers are quick tools, enabling us to fight danger for seniors

EARTHQUAKES:

DAMAGE

We have triage activities to help us be prepared in case of a major earthquake. Gas and electrical problems can exacerbate mild to major quakes. Disaster meetings will cover potential gas and electrical solutions. We go over real life situations. We cover solutions for residents that are not mobile and may need help during a black out or storms.

We feel the train coming and going but its not dangerous

Earthquakes safety requires a lot of tenant coordination.

FLOODING:

DAMAGE

Desert rains are very unpredictable and we need to be ready in the event they present present danger. When we have rain, it sometimes comes to us in large quantities over short period of time. Do not drive through pooling water that may be deeper than anticipated. Oils surface during a first rain, of the season, making roads very slippery.

Drought is an ever present problem in California

Too much moisture is also extremely dangerous
